

Executive Summary:

- Overall, we see that foreign giving generates a large amount of money for academic institutions in the U.S with the average gifting for each U.S. universities sitting at around \$52 million. This is earned primarily through two types of gifts, monetary gifts and contracts, where contracts make up a majority of gifts and a majority of the total amount earned across the academic institutions. There are though schools that outperform others in the amount of gifting received. Carnegie Mellon University received the highest amount of foreign gifting at almost \$1.5 billion. We also see that the country giving the highest amount of gifting to U.S. academic institutions is Qatar at just over \$2.7 billion. UVA specifically ranks below many other academic institutions in terms of foreign gifting, including when compared to other top public universities. It had received a total of just over \$22 million in total across 98 gifts. The top countries giving to UVA, in terms of dollar amount, were Sweeden and Bangladesh while England had given the highest number of gifts to UVA. This led to the recommendation of exploring further opportunity for contracts in England where they have established gifting relationships, primarily in the form of monetary gifts, to be able to earn a higher amount of gifting. They also have the potential to explore connections at other public universities that are receiving large amounts of foreign gifting to better understand the strategy and network that led to success and plan their approach to be similar.

Summary of Results:

- This foreign gifting dataset contains information about foreign gifting across three categories: Monetary gifts, contracts, and real estate. There are very few instances of real estate gifting, and the remaining gifts are 40% monetary gifts and 60% contracts. Almost all institutions had received less than \$100 million in foreign gifting with the median of average total gifting across institutions at almost \$6.5 million and the mean just over \$52 million. The country that gives the largest amount of foreign gifting is Qatar which between it and Cornell University, had the largest flow of money between a single country and a single university. The country with the highest average gift amount given was Bermuda. On the institution side, Carnegie Melon University received the largest total dollar amount of foreign gifting while University of California, Los Angeles received the most gifts by count.

- When looking at University of Virgina alone we see that it had received just over \$22 million across 98 foreign gifts. This is less than the average amount of foreign gifting across all institutions but higher than the median of total foreign gifting. UVA received the largest volume of gifts from England but the largest dollar amount of gifts from Bangladesh and

Sweeden. Most gifts received by UVA were Contracts which also earned UVA the highest dollar amount when compared to monetary gifts. When compared to other top public universities, UVA ranks well below many of its peers in total dollar amount of foreign gifts as well as in the number of foreign gifts received.

Strategy for Finding New Potential Sources of Money:

- One of the findings I had from looking at this data is that contracts make up a high proportion of not only the number of gifts to academic institutions but also in the total dollar amount they receive. When compared to monetary gifts, the dollar amount of gifting from contracts is almost double. This indicates that contracts are the way that institutions are increasing their foreign gifts the most. For UVA, looking for opportunities to grow the number of contracts they have could be a way to optimize the amount of dollars they earn without having to increase the total number of gifts they receive. One way to go about this could be to explore additional contracts with England, who they do receive the highest number of gifts from, but are not currently earning the highest dollar amount from. This could look like approaching existing relationships they have with monetary giftors from England and exploring their interest in contracts with UVA. This also could look like engaging with other fundraising and development departments at similar top public universities, like University of California, Berkeley, who have a strong performance in maximizing gifting amount while not having the top performance in the number of individual gifts.

Summary of UVA's Prospects:

- While UVA currently is performing below many of its peers, it does already have a strong history of foreign giving it can build on. With a high volume of gifts coming from countries like England, and large amounts of gifting coming from countries like Sweeden and Bangladesh, there is opportunity to explore additional opportunities for contracts with these places. They also have a potential network of other top public universities that are performing strongly in foreign gifting to gain insights and potential strategy advice from. These are both relevant prospects for UVA to pursue to increase the foreign giving they receive.
